

Executive Summary

FNP Sales Analysis Dashboard using Microsoft Excel

Project Overview

The FNP Sales Analysis Dashboard is an interactive business intelligence dashboard developed using Microsoft Excel to analyze the sales performance of Ferns N Petals (FNP). The project transforms raw transactional sales data into meaningful business insights through interactive visualizations, Key Performance Indicators (KPIs), and dynamic filters. The dashboard enables management to monitor sales performance, understand customer purchasing behavior, identify revenue trends, and support data-driven business decisions.

The dashboard was created using Excel's analytical features, including Pivot Tables, Pivot Charts, Slicers, Timelines, Conditional Formatting, and Excel formulas, providing a user-friendly interface for exploring sales data across different dimensions.

Problem Statement

Ferns N Petals receives numerous customer orders across various occasions, product categories, and cities. However, the sales data is stored in raw tabular format, making it difficult for business users to quickly identify sales trends, monitor performance, and generate actionable insights.

Without a centralized reporting system, management faces several challenges:

- Difficulty identifying top-performing occasions and products.
- Limited visibility into regional sales performance.
- Inability to monitor customer spending patterns efficiently.
- Challenges in tracking delivery performance.
- Time-consuming manual analysis and report preparation.
- Difficulty making timely, data-driven business decisions.

As the volume of sales data grows, manual reporting becomes inefficient, increasing the need for an interactive analytical dashboard.

Project Objective

The primary objective of this project is to develop an interactive Excel dashboard that provides a comprehensive overview of FNP's sales performance. The dashboard is designed to answer key business questions and help stakeholders make informed decisions by presenting data in a simple, visual, and interactive format.

Business Objectives

The dashboard helps answer the following business questions:

- Which occasions generate the highest revenue?
- Which product categories contribute the most to total sales?

- Which cities receive the highest number of customer orders?
 - Which products are the top revenue generators?
 - How does revenue change across different months?
 - Which day of the week generates the highest revenue?
 - What is the average customer spending per order?
 - What is the average delivery time between order and delivery?
-

Solution

To address these business challenges, an interactive Sales Analysis Dashboard was developed in Microsoft Excel. The solution integrates multiple Excel features to convert raw sales data into meaningful business insights.

The dashboard enables users to:

- Monitor overall business performance using KPIs.
- Filter sales data dynamically using Order Date, Delivery Date, and Occasion slicers.
- Compare revenue across occasions, categories, cities, products, and time periods.
- Identify sales trends and seasonal demand.
- Analyze customer purchasing behavior.
- Evaluate delivery performance.

The dashboard eliminates manual reporting by providing an automated and interactive reporting environment.

Dataset Description

The project uses an FNP sales dataset containing approximately 1,000 customer , Product, orders.

The dataset includes the following information:

- Order ID
- Order Date
- Delivery Date
- Product Name
- Product Category
- Occasion
- Revenue
- Customer Name
- City

- Quantity

The data was cleaned and transformed before analysis to ensure consistency and accuracy.

Tools and Technologies Used

- Microsoft Excel
 - Pivot Tables
 - Pivot Charts
 - Slicers
 - Timeline Filters
 - Conditional Formatting
 - Data Cleaning
 - Data Formatting
 - Excel Functions (SUM, AVERAGE, COUNT, IF, etc.)
-

Key Performance Indicators (KPIs)

The dashboard highlights the following business metrics:

- Total Orders: 1,000
- Total Revenue: ₹35,20,984
- Average Customer Spend: ₹3,520.98
- Average Delivery Time: 5.53 Days

These KPIs provide management with an instant overview of overall business performance.

Dashboard Features

The dashboard contains interactive reports for:

- Revenue by Occasion
- Revenue by Product Category
- Orders by City
- Monthly Revenue Trend
- Top 5 Revenue-Generating Products
- Revenue by Day of the Week

Interactive slicers allow users to filter reports by:

- Order Date

- Delivery Date
- Occasion

This provides flexibility for users to explore sales performance from multiple perspectives.

Key Business Insights

The analysis reveals several valuable business insights:

- Anniversary and Raksha Bandhan generate the highest revenue among all occasions.
 - The Colors category contributes the highest sales revenue.
 - Certain cities consistently receive more customer orders than others.
 - Monthly sales fluctuate significantly, indicating seasonal demand.
 - Customers spend an average of ₹3,520.98 per order.
 - The average delivery time is 5.53 days, reflecting consistent delivery performance.
 - A small number of products contribute a large share of total revenue, highlighting key revenue-driving items.
-

Business Impact

The dashboard provides valuable support for business decision-making by enabling management to:

- Monitor sales performance through real-time KPIs.
 - Identify high-performing occasions for targeted marketing campaigns.
 - Optimize inventory planning based on product demand.
 - Improve regional sales strategies by identifying high-performing cities.
 - Understand customer spending behavior for pricing and promotional decisions.
 - Monitor delivery efficiency to enhance customer satisfaction.
 - Reduce manual reporting efforts through automated analysis.
-

Skills Demonstrated

This project demonstrates practical knowledge of:

- Data Cleaning
- Data Preparation
- Data Analysis
- Business Intelligence
- Dashboard Design

- KPI Reporting
 - Data Visualization
 - Interactive Reporting
 - Pivot Tables
 - Pivot Charts
 - Excel Formulas
 - Slicers and Timelines
 - Business Insight Generation
-

Project Outcome

The FNP Sales Analysis Dashboard successfully transforms raw sales data into an interactive decision-support system. It enables users to monitor business performance, identify revenue trends, evaluate customer purchasing behavior, and analyze operational efficiency through dynamic visualizations and KPIs.

By presenting complex sales data in an intuitive dashboard, the project demonstrates how Microsoft Excel can be effectively used as a business intelligence tool to support strategic planning and data-driven decision-making.

Conclusion

The FNP Sales Analysis Dashboard is a comprehensive Excel-based data analytics project that converts raw transactional data into meaningful business insights. Through interactive visualizations, KPIs, and dynamic filters, the dashboard enables stakeholders to evaluate sales performance across occasions, categories, cities, products, and time periods.
